### Winter Care of Roads.

Water, not cold, is the cause f the deterioration of resigning tants or more, as provided by Article winter, according to the road idly frozen than at any other always detrimental to spignway. When cold weather turns this! water into ice the damage that it does is greatly increased. Ice 2 occupies considerably more space than the water from which it is formed, and every person who has lived in a cold climate is familiar with the powerful bursting effect of water whea left to population of twenty-five hundred in-habitants or more, as shown by the freeze in a confined vessel. The parlance, the road heaves. Later, when the frust heaves, the road is disintegrated and ruts

In order to expand on freezing, these materials must contain or be mixed with water, and the more water they contain the greater the expansion which takes place.
